The interpretation of data assigns a meaning to the information analyzed and determines its signification and implications. The importance of data interpretation is evident and this is why it needs to be done properly. Data is very likely to arrive from multiple sources and has a tendency to enter the analysis process with haphazard ordering.

The infra-red spectrum for an alcohol. Ethanol. The O-H bond in an alcohol absorbs at a higher wavenumber than it does in an acid - somewhere between 3230 - 3550  $\text{cm}^{-1}$ . In fact this absorption would be at a higher number still if the alcohol isn't hydrogen bonded - for example, in the gas state.
