Bile a digestive juice produced by the liver helps the body absorb fat into the bloodstream. This thick yellow-green substance can be found in the gall bladder, where it is stored until the body needs some to digest fats. 3. The Liver Stores Glycogen The liver also helps the body use carbohydrates another important component in food.

We have synthesized five different fluorogenic bile salts for simple and continuous reporting of hydrolysis in both murine and human fecal samples. Our data demonstrate that most gut microbiomes have the highest capacity for hydrolysis of host-produced primary bile salts, but some microbially modified secondary bile salts also display significant turnover.

### **Simple Analysis of Primary and Secondary Bile Salt ...**

Biliary tract's main purpose is to transport bile from the liver to the duodenum. Bile is a fluid of yellowish-brown colour which consists of bile salts, bile pigments (bilirubin, biliverdin), fatty acids, lipids, cholesterol etc. It partakes in emulsification of fats. Around 0,5-0,7 l of bile is produced per day. Biliary tract can be divided by the localisation into intrahepatic (inside of the ...
