Allergies and asthma often occur together. The same substances that trigger your hay fever symptoms, such as pollen, dust mites and pet dander, may also cause asthma signs and symptoms. In some people, skin or food allergies can cause asthma symptoms. This is called allergic asthma or allergy-induced asthma.

Allergies can trigger an asthma attack; however, asthma is present in some people without allergies. Asthma involves inflammation of the lungs that constricts the muscles around your airways, resulting in chest wheezing, coughing and shortness of breath. The bronchial tubes tighten and air flow is reduced as the lungs expand.
