In modern dam engineering, the choice of materials is usually between concrete, earthfill, and rockfill. Although in the past a number of dams were built of jointed masonry, this practice is now largely obsolete and has been supplanted by concrete. Concrete is used to build massive gravity dams, thin arch dams, and buttress dams.

Due to the shortage of fresh water, the quality of stored water in reservoirs has become increasingly important. Thermal regime and salinity are factors that affect the quality of water reservoirs. These two parameters were studied in Mamloo Dam in Tehran province. This dam has recently started to be used as a source of drinking water for Tehran and thus its water quality is of increased ...

Latian dam located 27 km fur ther from the site of constructing Mamlu dam was first built in 1968 to supply a part of Tehran's drinking water. The initial plan was to yearly reserve 1/3 drinking water and 2/3 for fields of Varamin plain. The exceeding number of Tehran's population made major changes on the above mentioned relations.
