Injury is the third leading cause of death in the United States and is the leading cause of death in those aged 44 years or younger. 1 Ten percent of deaths worldwide are due to injury, 2 greater than that of HIV, tuberculosis, and malaria combined. 3 In contrast to other causes of trauma death such as traumatic brain injury (TBI), sepsis, and multiple organ failure, exsanguination occurs ...

Advances in the understanding of trauma-induced ...

As the leading cause of trauma-related mortality, blood loss due to hemorrhage is notoriously difficult to triage and manage. To enable timely and appropriate care for patients with trauma, this work elucidates the externally measurable physiological features of exsanguination, which were used to develop a globalized model for assessing blood volume status (BVS) or the relative severity of ...

Enabling the assessment of trauma ... - Science Advances

On this Refresher course, the hands on scenario-based skills stations seemed well received. I also had an hour after the MCQ to talk about 'Trauma Teams and Advances in Trauma' - a golden opportunity to chat about things like human factors in trauma team dynamics, as well as to draw on experiences from the group about well-run and not-so-well run traumas.
