Atherothrombosis and Coronary Artery Disease

Experimental studies in a pig model showed that the difficulties of coronary wall imaging are due to a combination of cardiac and respiratory motion artefacts, nonlinear course, small size, and location of the coronary arteries. 48 Our group extended the black-blood MRI methods used in the human carotid artery and aorta to imaging the coronary arterial lumen and wall. 49 High-resolution black ...

Key Difference - Coronary Artery Disease vs Atherosclerosis Atherosclerosis is a pathological condition of the arteries that is characterized by the buildup of fat deposits inside the arterial wall. When atherosclerosis takes place in the coronary arteries there is an occlusion of the arterial lumen leading to a reduction in the myocardial perfusion which ends up as myocardial ischemia.

Coronary artery disease (CAD) and acute myocardial infarction (AMI) are inflammatory pathologies, involving interleukins (ILs), such as IL-1 β , IL-6 and tumor necrosis factor (TNF)- α , and acute phase proteins production, such as for C reactive protein (CRP). The process begins with retention of low-d ...

Atherothrombosis. Atherothrombosis forms on the basis of atherosclerotic lesions in 1 or more large arteries supplying the heart, brain, or other organs.10 Rupture or erosion of an atherosclerotic lesion provokes a hemostatic reaction, which may occur repeatedly and which will not cause major damage to the affected organ unless an occlusive thrombus forms11 that stops blood supply downstream ...
