identify and process human voice. It is used to identify the words a person has spoken or to authenticate the identity of the person speaking into the system. Automatic speech recognition is also known as automatic voice recognition (AVR), ...

What is Automatic Speech Recognition (ASR)? - Definition

...

Bookmark File PDF Automatic

Automatic Speech Recognition or ASR, as it's known in short, is the technology that allows human beings to use their voices to speak with a computer interface in a way that, in its most sophisticated variations, resembles normal human conversation.

Traditionally,
automatic speech
recognition focuses on
the recognition of the
spoken word on the
syntactical level [1].
Additionally, research
addresses the
recognition of the
spoken language, the
speaker, and the
extraction of emotions.
In the last decade
music information
retrieval became a
popular domain [2].
