Blackberry Java Application Ui And

BlackBerry devices with a SurePress™ touch screen, clicking the screen is equivalent to clicking the trackball or trackwheel. A BlackBerry® Java® Application should use the following input and navigation model as closely as possible. • Clicking the trackwheel, trackball, trackpad, or touch screen typically invokes a menu.

BlackBerry Java Application UI and Navigation

When you create UI applications using MIDlets, you can invoke a variety of BlackBerry APIs to provide specific functionality only available for BlackBerry Java applications. For example, if your MIDlet UI application requires the ability to notify users when specific events take place, it can invoke the methods available in the `net.rim.device.api.notification` package.

BlackBerry JDE API Reference: UI

All BlackBerry device applications include an application class that is derived from either the `Application` class, which is included in the `net.rim.device.api.system` package, or the `UiApplication` class, which is included in the `net.rim.device.api.ui` package. The `Application` class is the base class for all applications on the device, and applications that are not required to respond to user ...

UI life cycle - Java SDK for BB OS 7.1 - BlackBerry Developer

You can use SVG in both MIDlets and BlackBerry Java applications. There are two ways to use SVG in your applications on a BlackBerry device: For BlackBerry Java SDK 4.6 and later, you can use SVG directly by using the classes and interfaces in the `org.w3c.dom`, `org.w3c.dom.events`, and `org.w3c.dom.svg` packages.

UI components - Java SDK for BB OS 7.1 - BlackBerry

Your BlackBerry application starts off from a blank slate. The Java Development Environment (JDE) creates an empty workspace, and you will add a project and Java source files. You need to implement subclasses of some basic BlackBerry library classes to create a full-fledged application: `net.rim.device.api.ui.UiApplication`: This is your application class, which is the overseer of [...]
