Beta-Blockers vs. Calcium Channel Blockers: Blood Pressure ...

Calcium Channel Blockers Definition
Calcium channel blockers are medicines that slow the movement of calcium into the cells of the heart and blood vessels. This, in turn, relaxes blood vessels, increases the supply of oxygen-rich blood to the heart, and reduces the heart's workload. Purpose Calcium channel blockers are used to treat high blood pressure ...

Calcium channel blockers - Medical Dictionary

Calcium channel blockers differ in their duration of action, the process by which they are eliminated from the body, and, most importantly, in their ability to affect heart rate and contraction. Some calcium channel blockers (for example, amlodipine [Norvasc]) have very little effect on heart rate and contraction so they are safer to use in individuals who have heart failure or bradycardia (a ...
