In che modo si può combattere il global warming? Di fronte a problemi come il surriscaldamento globale si reagisce molte volte con una certa rassegnazione, come se non si possa fare altrimenti. Un atteggiamento di questo tipo purtroppo non può che peggiorare le sorti del Pianeta, mentre è opportuno attivarsi in prima persona per cercare di tutelarlo, per quanto possibile, anche solo nel ...

Riscaldamento globale - Wikipedia

Carbon dioxide (CO₂) is an important heat-trapping (greenhouse) gas, which is released through human activities such as deforestation and burning fossil fuels, as well as natural processes such as respiration and volcanic eruptions. The first graph shows atmospheric CO₂ levels measured at Mauna Loa Observatory, Hawaii, in recent years, with average seasonal cycle removed.

What is climate change? A really simple guide - BBC News

The current global average temperature is 0.85°C higher than it was in the late 19th century. Each of the past three decades has been warmer than any preceding decade since records began in 1850. The world's leading climate scientists think human activities are almost certainly the main cause of the warming observed since the middle of the 20th century.

Causes of climate change | Climate Action

Carbon dioxide, a key greenhouse gas that drives global climate change, continues to rise every month. Find out the dangerous role it and other gases play.

Carbon dioxide in the atmosphere is at a record high.
