ProLiant DL380 Storage Server

Tactical Guideline: Use a rack unit as the primary planning factor for estimating the space and power requirements of the data center. Each rack configuration should reflect total power, space and floor-loading demands. Strive for an average of 4 kilowatts per rack across the layout.

Use Best Practices to Design Data Center Facilities

In recent years, data centers have standardized on server cabinets (enclosed racks with mounting rails front and rear) with 3/8" square holes, rather than the pre-tapped holes of the past. Square holes have enabled server and storage vendors to use rails that latch into the rack, which are both stronger and easier to install than bolt-in rails.
