Suppose you have a 3.7 V battery but you need 5 V for your device then you can use boost converter. Because of the ease with which boost converters can supply large over voltages, they will almost always include some regulation to control the output voltage, and there are many I.Cs. manufactured for this purpose A typical example of an I.C. boost converter is the LM27313 from Texas Instruments.

For beginners who have little or no previous knowledge of hacking, it is always better to start off from the basics. Instead of directly learning how to hack , you can begin exploring more about topics such as computer networks, network ports, firewalls, common network protocols like IP address, HTTP, FTP, DNS, SMTP etc. along with how each of those stuffs work.

Each variable has two properties: type and storage class. Type identifies to the data type of a variable and storage classes in C, informs the compiler where to keep a variable, the way to save the variable, what's the scope (visibility), initial value and lifetime (local or global) of the variable. All variables defined in a program get some physical location in memory where the variable ...
