Stress Management (CISM)

During the webinar, Chris shared his thoughts on the key components of effective incident management. Read on to learn about these elements of incident management and how your team can ensure that you're well-prepared to handle any incident that comes your way. 1. A well-defined incident management process

The Four Critical Components of Effective Incident Management

Critical Incident Stress Management (CISM) is a comprehensive, integrative, multicomponent crisis intervention system that spans the entire temporal spectrum of a crisis (Everly & Mitchell, 1997). CISM serves to address the various forms of stress reactions that result from critical incidents and cause individuals psychological distress.

Management

Because the different levels of incident management trigger different processes for response, it is critical to define roles and responsibilities for execution. These roles and responsibilities define who will drive process improvement, report key performance indicators (KPIs), and execute and enforce process workflow.
