This help from CD4 + T cells additionally activates the matured dendritic cells and licenses them to efficiently induce CD8 + memory T cells, which are also able to be expanded a second time. [13] [14] For this activation of dendritic cells, concurrent interaction of all three cell types, namely CD4 + T helper cells, CD8 + T cells and dendritic cells, seems to be required.

Dendritic cell - Wikipedia

Dendritic cells (DCs) are antigen-presenting cells derived from bone marrow precursors and form a widely distributed cellular system throughout the body. DCs exert immune-surveillance for exogenous and endogenous antigens and the later activation of naive T lymphocytes giving rise to various immunological responses.
