Analysis
analysis (EDA) is an approach to analyzing data sets to summarize their main

characteristics, often with visual methods. A statistical model can be used or not, but primarily EDA is for seeing what the data can tell us beyond the formal modeling or hypothesis testing task. Exploratory data analysis was promoted by John Tukey to encourage statisticians

Exploratory Data

Exploratory data analysis - Wikipedia

Exploratory statistics aims to find previously unknown structures and correlations in the data and thereby generate new hypotheses. These hypotheses, based on sample data, can then be examined for their general validity using probability-theoretical methods. Descriptive
