Abstract. The design of movable hydraulic closures must also take other actions and loads into account than discussed in the preceding chapter. This includes diverse contact phenomena, such as friction and wear, fatigue loads due to hydraulic load variations, and the action of gate drives, seismic loads, possible vibrations, downpull and uplift forces, power, and other failures.

Hydraulic downpull on downstream-seal, roller-mounted gates in entrance transitions of large conduits is primarily of concern to gate-hoisting equipment designers. The parameters obtained for the 17.50- by 22.89-foot San Luis gates can be adapted to the design of geometrically similar installations.
