A Unit injector (UI) is a high pressure integrated direct fuel injection system for diesel engines, combining the injector nozzle and the injection pump in a single component. The plunger pump used is usually driven by a shared camshaft.In a unit injector, the device is usually lubricated and cooled by the fuel itself. High pressure injection delivers power and fuel consumption benefits over ...

Unit injector - Wikipedia

An electronic unit injector is a unit injector that has electronic control. Its camshaft-driven delivery of pressurized fuel coupled with management of the internal operations' timing by an engine control unit allows electronic unit injectors to achieve certain benefits over conventional unit injectors. The electronic unit injector is ...

DETROIT DIESEL UNIT INJECTION SYSTEMS . The fuel system used by Detroit diesel is known as a low-pressure fuel system, owing to the fact that fuel delivered to the unit injectors averages 45 to 70 psi. This is much lower than the average 2,500 to 300 psi that passes through the fuel line from the injection pump and nozzles used in other systems.

In 1985, Detroit Diesel's Series 92 two-stroke engine became the first heavy-duty diesel engine to adopt electronically controlled unit injection [2151]. Since this introduction of electronic control, unit injectors continued to evolve to higher levels of sophistication.

Unit Injector and Unit Pump Systems

electronic unit injector. The heart of the diesel engine is the fuel injection system. It has the vital function of communicating with the Electronic Control Module (ECM) and pumping a measured quantity of fuel into each cylinder at precisely the right moment. The unit injector does all this with simple design and few parts.
