Dfsmstvs Overview And Planning Guide

DFSMStvs is an enhancement to VSAM RLS access that enables multiple batch update jobs and CICS to share access to the same data sets. DFSMStvs provides two-phase commit and backout protocols, as well as backout logging and forward recovery logging. DFSMStvs provides transactional recovery directly within VSAM. DFSMStvs is an extension to VSAM RLS.

DFSMStvs overview - IBM

This IBM Redbook describes how DFSMStvs works, how and when you might use it, and what you need to consider in your plans. This book should be of interest to you if you want to understand how you can increase the service hours of a CICS/VSAM system by reducing or eliminating the batch window, or if you want to run multiple concurrent batch jobs updating common VSAM data sets.
