The Ultra Capacitor system (Fig. 4) also provides a burst of power to help restart the engine along with providing additional power to the vehicle's electrical system. The high voltage drop caused by current drawn during an engine restart is compensated by the voltage provided by the two double-layer capacitors, which store energy in an electric field.

The Computer Command Control (CCC) system comprises the Electronic Control Module (ECM) and information sensors which monitor various engine functions and returns data to the ECM. The data is processed by the ECM and, if necessary, the ECM issues commands to change the operating parameters of the engine to optimise performance and economy at all times.

### Computer Command Control (CCC)

FAST™ engineers have developed the simplest plug-and-play, self tuning engine control system on the market for the LS series of engines. The FAST™ EZ-EFI 2.0® LS Self Tuning Engine Control Kit is the easiest way to get your LS transplant up and running without the complex PCM flashing and harness reworking required with the stock unit.
