Earthworm Dissection - Seneca Valley School District

Earthworm Dissection Lab Answers. Worms do many of the things humans do to survive. They breathe, move around, reproduce, and eat. Worms have the epidermis; wich is like our skin, a layer of nerve tissue, wich acts like our sense of touch. Instead of having just one heart, they have five hearts. These hearts regulate blood flow and produce a pulse, just like ours.

Earthworm Dissection Lab Answers | SchoolWorkHelper

Dissect the earthworm as suggested in the dissection of general anatomy. As soon as the alimentary canal is exposed locate supra-pharyngeal the cerebral ganglia above the pharynx. Now remove the alimentary canal, as suggested in dissection of reproductive system, exposing the ventral nerve cord till you are able to see the sub-pharyngeal ganglia.
