Norwegian sector of the North Sea about 320 km (200 mi) southwest of Stavanger. Discovered in 1969 by Phillips Petroleum Company, it remains one of the most important oil fields in the North Sea. This was the first discovery of oil after the drilling of over 200 exploration wells in the North Sea "triggered" by the Groningen gas field discovery.

“The Ekofisk field still produces 125,000 to 130,000 barrels of oil equivalent gross per day, but a lot of effort goes into maintaining that production. We’re introducing new technologies, including more-efficient drilling as well as advanced seismic imaging and field modeling,” Fredheim said.
