BS EN 868-5:2018 states that: Follow ASTM F88/F88M. Record the average force over the middle of measured profile by discarding 10% on each side of curve. ASTM F88/88M states that: The initial ramp-up from zero to the force required to peel is not indicative of seal strength so it should not be included in the calculation of average strength.

The tensile test is carried out according to EN 868-5 and ASTM F88/F88M. During the tensile test, one or more strips of defined width (e.g. 15 mm) are cut out of the packaging at right angles to the sealing seam. A calibrated tensile testing machine is used to measure the force required to open the sealing.
