INTRODUCTION o In 1964, Simring and Goldeberg - first described the relationship between endodontics and periodontics. • ENDODONTIC LESION is used to denote an inflammatory process in the periodontal tissues resulting from noxious agents present in the root canal system of the tooth, usually a root canal infection.

#### Endodontic periodontic interrelationship - SlideShare

The fact that the periodontium is anatomically interrelated with the dental pulp by virtual of apical foramina and lateral canals creates pathway for exchange of noxious agents between the two tissue compartments when either or both of the tissues are diseased.

#### Interrelationship between periodontics and endodontics

Abstract. Endodontic-periodontal lesions present challenges to the clinician regarding diagnosis, treatment planning and prognosis. Etiologic factors, such as bacteria and viruses, as well as contributing factors, such as trauma, root resorptions, perforations, cracks and dental malformations, play an important role in the development and progression of such lesions.

#### Interaction between endodontics and periodontics

Endodontic therapy is instigated in teeth that have closed apices 1-2 weeks post transplantation. Teeth that have open apices or immature roots need to be closely monitored for loss of pulpal vitality. Orthodontic tooth movement can commence once periodontal healing has occurred between 3 and 9 months . Autotransplanted teeth if successful will behave as any other teeth and retain the potential to induce alveolar bone growth.

#### Orthodontic-Endodontic Interrelationship | Pocket Dentistry

Please note pocket depths around the tooth or teeth in question, mobility. Note the patient's general periodontal health. Prosthodontic consult: Is the tooth restorable? Refer to prosthodontic consultation note with date. Note any questions of restorability, anticipated need for crown lengthening, etc.

#### Endodontic Consultation Note Template - Practice ...

Orthodontics and periodontics are interrelated in a variety of ways. Orthodontic treatment is based on the principle that if prolonged pressure is applied to a tooth, tooth movement will occur as the bone around the tooth remodels. Bone is selectively removed in same areas and added in others.
