Better known for audio books, Myanonamouse has a larger and friendly community with some strict rules.

Engine Test Morse

the morse test can be used to measure the indicated power and mechanical efficiency of multi cylinder engines . The engines test is carried out as follows . The engine is run at maximum load at certain speed . The B.P is then measured when all cylinders are working . Then one cylinder is made in operative by cutting off the ignition to that ...

MORSE TEST ON MULTI CYLINDER PETROL ENGINE

Morse Test. Morse test is a method to measure the frictional power of a multicylinder SI engine. Morse Test – This test carried out on multi cylinder I.C. engine. In this test, first engine is allowed to run at constant speed and brake power of engine is measured when all cylinders are working and developing indicated power.

Morse Test: Used for multi cylinder engines. Procedure: The engine is run at the required speed and the torque is measured. One cylinder is cut out by shorting the plug if an S.I. engine is under test. The speed falls because of the loss of power with one cylinder cut out but is restored by reducing the load.

Morse test can be conducted for Multi cylinder engines The purpose of Morse test is to obtain the approximate indicated power of a Multi cylinder engine. It consist of running the engine against the dynamo-meter at a particular speed, cutting out the firing of each cylinder in turn and noting the fall in BP each time while maintaining the speed constant.

Morse Test , Indicative power of an engine and Rope Brake dynamometer

An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

Internal combustion engine - Wikipedia

Engine performance is an indication of the degree of success of the engine performs its assigned task, i.e. the conversion of the chemical energy contained in the fuel into the useful mechanical work. The performance of an engine is evaluated on the basis of the following : (a) Specific Fuel Consumption. (b) Brake Mean Effective Pressure.
