Factoring Trinomials -  
KEY Clear Targets: I  
can factor trinomials  
with and without a  
leading coefficient.

Concept: When  
factoring polynomials,  
we are doing reverse  
multiplication or “un-  
distributing.”

Remember: Factoring  
is the process of  
finding the factors that  
would multiply

Multiplying  $(ax + 2y)(3 + a)$ , we get the original expression  $3ax + 6y + a^2x + 2ay$  and see that the factoring is correct. This is an example of factoring by grouping since we "grouped" the terms two at a time. Multiply  $(x - y)(a + 2)$  and see if you get the original
