NetWare 2 supported 16MB of server memory and even able to multitask with a copy of MS-DOS for non-dedicated operation. However, it was a pain to install and configure: it was supplied on more than 20 floppy discs and requiring Novell's proprietary kernel to be re-linked for any configuration change - a lengthy session of "diskaerobics".

Because of this popularity and a loyal installed user base, Novell released an upgrade for NetWare 3.x in 1998, NetWare 3.2. It keeps the same architecture and basic kernel, but applies some patches and adds some new features (such as a Windows administration utility) to keep it up-to-date without changing the basic operating system features that users and administrators love.
