### **Assessment, investigation, and early management of head ...**

Head injury is a major public health problem both logistically and clinically. Many patients seek healthcare advice for this, although relatively few will need care in a neuroscience centre. Most will make a good recovery, but the incidence of ensuing disability even after apparently "minor" injury is surprisingly high. This article summarises the most recent guidance update from the ...

# Access Free Head Injury Assessment And Early Management Nice

A head injury is a broad term that describes a vast array of injuries that occur to the scalp, skull, brain, and underlying tissue and blood vessels in the head. Head injuries are also commonly referred to as brain injury, or traumatic brain injury (TBI), depending on the extent of the head trauma.

## **Head Injury | Department of Neurology**

Children with GCS 13-15 and other signs of mild head injury (headache, drowsiness, vomiting, loss of consciousness <5 seconds, not acting normally as per parents or significant mechanism of injury) may be observed in the emergency department for a period of up to 6 hours after trauma, with 30 minutely neurological observations (conscious state, PR, RR, BP, pupils and limb power)
