How Google Tests Software - Part One Tuesday, January 25, 2011 By James Whittaker This is the first in a series of posts on this topic. The one question I get more than any other is "How does Google test?" It's been explained in bits and pieces on this blog but the explanation is due an update.

Google Testing Blog: How Google Tests Software - Part One

The book goes on to breakdown testing responsibilities for software engineers (SWEs), software engineers in a test role (SETs), and Test Engineers (TEs). Almost half of the book deals with the roles and responsibilities of the TE, and in the Google model, they do have a higher-level role in testing.

Google Classroom: Creating a Test - YouTube

In my last post, I talked about building a structured path to production: which tests to include, when to do them, and why. In this post, we'll get into exactly how to do each kind of test. We'll cover the techniques of mocking and stubbing, and test-driven development to help each testing layer.. First, let's review a concept from the previous post: the test pyramid.

How to test software: mocking, stubbing, and contract testing

Rather than testing its software through and through, Facebook tends to use "canary" releases and an incremental rollout strategy to test fixes, updates, and new features in production. For example, a new feature might first be made available only to a small percentage of the total number of users.
