## **Investigation 19 World Population Growth [PDF, EPUB EBOOK]**

World population growth accelerated after World War II, when the population of less developed countries began to increase dramatically. After millions of years of extremely slow growth, the human population indeed grew explosively, doubling again and again; a billion people were added between 1960 and 1975; another billion were added between 1975 and 1987.

## **Human Population: Lesson Plans - Population Reference Bureau**

To compare to some of the epidemics of the past, the percentage of the world's population killed between 1993 and 2002 decreased from 0.30 percent of the world's population to 0.24 percent. Thus, it appears that the influence of infectious disease on human population growth is becoming less significant.

Unless COVID-19 stops by itself, a significant share of the world's population can be expected to catch COVID-19. In fact, some people may get the disease multiple times over their lifetimes. If we are forced to live with some level of COVID-19 (just as we are forced to live with some level of forest fires), we need to make this situation as painless as possible.

## **We Need to Change Our COVID-19 Strategy | Our Finite World**

It took hundreds of thousands of years for the world population to grow to 1 billion – then in just another 200 years or so, it grew sevenfold. In 2011, the global population reached the 7 billion mark, and today, it stands at about 7.6 billion. This dramatic
