Journal of Allergy and Clinical Immunology - Elsevier

Background: Cat allergy in human subjects is usually caused by the major cat allergen Fel d 1 and is found in approximately 10% of the Western population. Currently, there is no efficient and safe therapy for cat allergy available. Allergic patients usually try to avoid cats or treat their allergy symptoms.

Immunization of cats to induce neutralizing antibodies ...

Journal of Allergy and Clinical Immunology, a 2007 study Understanding Cat Allergies It is a common misconception that cat fur is the cause of cat allergies, but the primary culprit is a protein called "Fel d 1," which is excreted through cat skin and cat saliva and spread over their bodies when they clean themselves.

Allergies to cats are one of the most common allergies among individuals. Among the eight known cat allergens, the most prominent allergen is secretoglobulin Fel d 1, and it is produced in the anal glands, salivary glands, and, mainly, in sebaceous glands of cats, and is ubiquitous in the United States, even in households without cats. Allergic symptoms associated with cats include coughing ...

Allergy to cats - Wikipedia

When it comes to cat allergies, the main culprit is Fel d1, a small protein produced primarily in cats' salivary and sebaceous glands. Fel d1 is found in flakes of dead skin, or dander, and is...
