if w has an odd number of 1's, then so does z . by the inductive hypothesis, $\delta^*(a, z) = b$, and the transitions of the dfa tell us $\delta^*(a, w) = b$. thus, in this case, $\delta^*(a, w) = a$ if and only if w has an even number of 1's.
case 2: $a = 1$. if $w \dots$

Purpose of the Theory of Computation:
Develop formal mathematical models of computation that reflect real-world computers. This field of research was started by mathematicians and logicians in the 1930's, when they were trying to understand the meaning of a "computation". A central question asked was whether all
