Hint A.2.a: How to approach the problem: Assume that the wire has cross-sectional area A . The tensile strength and tension in the wire at the breaking point are related by $T = \sigma A$. The density and mass per unit length are related by $\rho = \frac{m}{L}$. Use these expressions to convert the speed in terms of ω and r into a speed in terms of ω and L .

Mastering Physics - Answers And Solutions

So the acceleration is independent of the hoop characteristics, that is, the mass and size (radius) of the hoop. This is quite generally true for objects freely rolling down a ramp; the acceleration depends only on the distribution of mass, for example, whether the object is a disk or a sphere, but within each class the acceleration is the same.
