The surface area and the volume of pyramids, prisms, cylinders and cones The surface area is the area that describes the material that will be used to cover a geometric solid. When we determine the surface areas of a geometric solid we take the sum of the area for each geometric form within the solid.

The prism has a volume of 48 cubic units. We can also find the volume by measuring. The base of each cube is 1 unit wide and 1 unit high so its area is 1 unit 2. Since there are 12 cubes in the base of the prism, the area of the prism base is 12 units 2. The length of one cube is 1 unit, so the total length of the prism is 4 units.
