help you navigate these changes. The cloud is changing the way applications are designed. Instead of monoliths, applications are decomposed into smaller, decentralized services. These services communicate through APIs or by using asynchronous messaging or eventing.

Cloud Application Architecture Guide - info.microsoft.com

Design your application to be self healing when failures occur. In a distributed system, failures happen. Hardware can fail. The network can have transient failures. Rarely, an entire service or region may experience a disruption, but even those must be planned for. Therefore, design an application to be self healing when failures occur.
