The translation process is a simple turn key process with minimal user intervention. The translator output is ANSI C or K&R C code that is ready to be tested with the target compiler.

Both C and Pascal allow arrays of other complex types, including other arrays.

However, there the similarity between the languages ends. C arrays are simply defined by a base type and the number of elements: `int a [SIZE];` and are always indexed from 0 up to `SIZE-1` (i.e. modulo `SIZE`).

Migrating From Pascal to C++ (eBook, 1997) [WorldCat.org]

There are Pascal to C/C++ converters. (They will convert mostly to C, not C++..) The Pascal compiler I used on the Sun Sparc station about 10 years ago WAS a converter. It converted the Pascal code to C code and then ran the C compiler to compile it.
