P0345 and P0340 are "Camshaft Position Sensor" problems. Hopefully it is only a wire or sensor bad, and not a camshaft improperly lined up when the belt was changed. Go back to dealer to have the problem fixed. If the motor runs smoothly, it should be okay to drive to the dealer. The mechanic might have left a sensor wire disconnected.

P0340 OBD-II Trouble Code - Camshaft Position Sensor Circuit Malfunction This indicates that a problem was detected in the camshaft position sensor circuit. Since it says circuit, that means the problem could lie in any part of the circuit - the sensor itself, the wiring, or the PCM.

SOLVED: Code p0340 camshaft position sensor bank circuit ...
P0340 is a diagnostic trouble code (DTC) for "Camshaft Position Sensor Circuit Malfunction". This can happen for multiple reasons and a mechanic needs to diagnose the specific cause for this code to be triggered in your situation.

P0340 OBD-II Trouble Code: Camshaft Position Sensor ...
Depending on year, make, and model, DTC P0385 may have number of causes, pretty much the same as those causing DTCs P0340 or P0345: Faulty Sensor - If the sensor is open or shorted, due to age, damage, or corrosion, no signal will be generated. Poor Installation - A good CKP signal is highly dependent on sensor placement.
