In mathematics, nonlinear programming (NLP) is the process of solving an optimization problem where some of the constraints or the objective function are nonlinear. An optimization problem is one of calculation of the extrema (maxima, minima or stationary points) of an objective function over a set of unknown real variables and conditional to the satisfaction of a system of equalities and ...

models arising in stochastic programming and in location theory
are discussed. Finally, we provide an important discussion on
modeling and on formulating nonlinear programs from the
viewpoint of favorably influencing the performance of algorithms
that will ultimately be used for solving them.
