Photobiology is the scientific study of the beneficial and harmful interactions of light (technically, non-ionizing radiation) in living organisms. The field includes the study of photophysics, photochemistry, photosynthesis, photomorphogenesis, visual processing, circadian rhythms, photomovement, bioluminescence, and ultraviolet radiation effects. The division between ionizing radiation and ...

### **Photobiology - Wikipedia**

PHOTOBIOLOGY is broadly defined to include all biological phenomena involving non-ionizing radiation. It is recognized that photobiological responses are the result of chemical and/or physical changes induced in biological systems by non-ionizing radiation.

### **Photobiology**

Photobiology is the science studying the effects on biological systems of non-ionizing radiation - specifically ultraviolet, visible and infrared radiation, either from sunlight or from artificial sources. This transdisciplinary field encompasses scientific, technological and medical aspects, and impacts the civil society, through dealing with light-driven processes related to, for instance ...

Photobiology is a large discipline that includes studies of both the beneficial and harmful effects of light. It covers topics from the atomic level to that of ecological communities.

Photobiologists use all of the tools of science to study the chemical and biological effects of light and other non-ionizing radiation.

### **What is Photobiology?**

Photobiology is the study of the interaction or the relationship between living organisms and the light. Living organisms consist of all plants and animals. In technical terms, it is the interaction of the non-ionizing radiation with the micro-organisms. The field of photobiology is essential for understanding the relationship between an ...

Photobiology is involved in every vital activity of plants and animals. Photobiology is divided into a number of branches according to the functions performed by the various phenomena studied. One area of study is plant photosynthesis, that is, the energy processes associated with the storage of solar energy in synthesized biological compounds.
