using electromagnetic forces, such as electric motors, electric generators, and others. They are electromechanical energy converters: an electric motor converts electricity to mechanical power while an electric generator converts mechanical power to electricity. The moving parts in a machine can be rotating or linear. Besides motors and generators, a third category often included is transformers, which although they do no

## **Electric machine - Wikipedia**

In electrical machines, either input or output or both can be electricity. Types of Electrical Machines. The electric machines are of three main types, transformer, generator, and motor.
