Many security measures are used to protect the confidentiality, integrity, and availability of an SAP landscape. For example, to secure user access, SAP has its own User Management Engine (UME) to control role-based access and authorization within the SAP application and databases. For details, see SAP HANA Security—An Overview.

Unify your security approach. Traditionally, SAP security relies on teams of specialist engineers. However, their complexity and criticality to business operations often exceed the capacity of smaller technology teams. Cenoti links SAP systems to Splunk, so you can manage your entire enterprise security monitoring via a single Splunk dashboard.
