Science And The Practice Of

Science and Practice of Strength Training, Second Edition, shows that there is no one program that works for any one athlete at all times or for all conditions. This book addresses the complexity of strength training programs while providing straightforward approaches to take under specific circumstances.

Science and Practice of Strength Training, Second Edition ...

The practice of science is commonly misrepresented as a simple, four- or five-step path to answering a scientific question, called "The Scientific Method." In reality, scientists rarely follow such a straightforward path through their research. Instead, scientific research includes many possible paths, not all of which lead to unequivocal answers.

Influence: Science and Practice is a psychology book examining the key ways people can be influenced by "Compliance Professionals". The book's author is Robert B. Cialdini, Professor of Psychology at Arizona State University. The key premise of the book is that in a complex world where people are overloaded with more information than they can deal with, people fall back on a decision making approach based on generalizations. These generalizations develop because they allow people to usually act
