Soldering (AmE: / ' s ɒ d ə r ɪ ŋ /, BrE: / ' s ɒ l d ə r ɪ ŋ /) is a  
process in which two or more items are joined together by  
melting and putting a filler metal into the joint, the filler metal  
having a lower melting point than the adjoining metal. Unlike  
welding, soldering does not involve melting the work pieces. In  
brazing, the work piece metal also does not melt, but the filler ...

## **Soldering - Wikipedia**

Hard (silver) soldering (>450 °C) – Brass or silver is the bonding  
metal used in this process, and requires a blowtorch to achieve  
the temperatures at which the solder melts. Brazing (>450 °C)  
– This type of soldering uses a metal with a much higher melting  
point than those used in hard and soft soldering.

The need for wave soldering equipment can also be met by simply retrofitting the conventional solder pot with the dual pot for dip soldering – at a small fraction of the cost of a new machine. A completely new machine is not necessary. Another wave geometry for PCB Assembly that is popular for surface mounting in Surface Mount Technology (SMT) is a vibrating single wave known as the omega wave.
