Three Phase

In this speed control method of 3 phase induction motor when the stator voltage is reduced, the air gap flux and the motor torque both will reduce. The speed control is obtained at the cost of reduction of motor torque. In this method, very low starting torque is produced. Therefore, this type of control is not suitable for

3 Phase Motor Speed Control Methods - your electrical guide

When the speed control of three phase induction motor is done by adding resistance in rotor circuit, some part of power called, the slip power is lost as $I^2 R$ losses. Therefore the efficiency of three phase induction motor is reduced by this

depends on various factors like supplied voltage, frequency, number of poles.

Speed of 3 phase induction motor needs to varied according to requirement. Speed controls from stator side as well as rotor side are also. induction motor is practically a constant speed motor, that means, for under loading condition, change in speed of the motor is quite small.

The speed control of three phase induction motor is done by stator voltage control. The output torque of the three phase induction motor is directly proportional to square of supply voltage for a given slip. The torque - slip characteristics of three phase induction motor is shown in figure A.

loop control of the 3 phase induction motor at variable speed using a 3 phase inverter. The 3 phase inverter is supplied from a 400V DC supply. The 3 phase inverter with 3 legs use IGBTs as switches for the generation of 3 phase output. The switches are controlled by pulses created by the PIC microcontroller.

Speed control by varying Rotor Resistance: This method is applicable to three-phase slip-ring induction motor only. By introducing external resistance in the rotor circuit, the speed of the motor can be reduced. The change in speed depends upon both rotor circuit resistance and load.

This project is proposed to control the speed of the three-phase induction motor by using the Arduino controller. The Arduino controller is used to produce the pulse width modulation (PWM) signals. And the motor speed is control by using the driver and three-phase inverter circuits.
