1.3-megapixel CMOS monochrome chip, with $5.2\mu \times 5.2\mu$ pixels for highly accurate guiding. That high accuracy due to the small pixel size means you can use the Orion StarShoot AutoGuider with smaller, less expensive guide scopes than what's possible with other guide cameras (such as the now-discontinued ST-4).

The standalone ST-4 I think you are referring to is the Orion StarShoot Solitaire Autoguider, which does not require a computer. The unit is self contained like the old SBIG ST4 autoguider. The Solitaire's ST4 output is connected directly to the 909 CCD port and the 909 is connected to the LXD75's AUX port.
