a young stellar object that derives its luminosity from the conversion of gravitational energy to thermal energy, rather than from nuclear reactions in its core. angular momentum. a conserved property of a rotating or revolving system whose value depends on the velocity and distribution of the system's mass.

chapter 5-9 understanding our universe Flashcards | Quizlet

You must know these things: Earth's diameter is about 8000 miles Moon's distance is about 60 Earth radii (240,000 miles) Average distance of Earth to Sun is about 93 million miles (150 million km) One light-year is how far light travels in a vacuum in a year, about 6 trillion miles.

Study Guide Beginning Astronomy - Texas A&M University

In both space and time the study of cosmic evolution allows us to see the universe as it really is, to reflect on our place in it, and to "know the place for the first time." Space programs may often seem bogged down in technical details, politics and funding controversies. But we should not lose sight of the longer term implications.

NASA - Our Place in the Universe

Investing millions of dollars every year in understanding the universe, its origin and existence is like insurance to our future. Every step towards understanding of universe is as good as the next stage of human development and advancement. Today, we have managed to come so far mainly due to advancement in astronomy and exploring the origin of universe. Imagine if we find out that every planet, after a certain time, just dies or explodes.

Studying The Origins Of The Universe - Why Is It Important?

A GUIDE TO UNDERSTANDING QUANTUM GRAVITY " Ptolemy made a universe which has lasted 1400 years. Newton made a universe which has lasted 300 years. Einstein also made a universe, but I can't tell you how long it will last."

Scientific American is the essential guide to the most awe-inspiring advances in science and technology, explaining how they change our understanding of the world and shape our lives.

The Warped Side of Our Universe - Scientific American

How fast is the universe expanding? We don't know for sure. Astronomers study cosmic expansion by measuring the Hubble constant. They have measured this constant in several different ways, but some of their results don't agree with each other. This disagreement, or tension, in the Hubble constant is a growing controversy in astronomy. But ...

How Fast Is the Universe Expanding? Measuring Cosmic ...

The bulk of the matter in the universe, about 96%, is thought to be dark matter, with ordinary matter - the visible stuff that makes up stars, planets and people - a mere 4%.
