A two-line element set (TLE) is a data format encoding a list of orbital elements of an Earth-orbiting object for a given point in time, the epoch. Using suitable prediction formula, the state (position and velocity) at any point in the past or future can be estimated to some accuracy. The TLE data representation is specific to the simplified perturbations models (SGP, SGP4, SDP4, SGP8 and SDP8 ...

Two-line element set - Wikipedia

However, gravity isn't the same everywhere on Earth. Gravity is slightly stronger over places with more mass underground than over places with less mass. NASA uses two spacecraft to measure these variations in Earth's gravity. These spacecraft are

not captured in the V7.2 gravity grid. A 1-D Hankel transform was used to convert these along-track residual slopes into residual gravity, and finally the V7.2 gravity was added back to form a full bandwidth gravity profile. We then extracted the ground-truth gravity along 40 of these stacked profiles in the northern Gulf from the EDCON data.
