A summation method that is linear and stable cannot sum the series $1 + 2 + 3 + \dots$ to any finite value. (Stable means that adding a term to the beginning of the series increases the sum by the same amount.) This can be seen as follows. If $1 + 2 + 3 + \dots = x$, then adding 0 to both sides gives $0 + 1 + 2 + \dots = 0 + x = x$ by stability.
