# File Type PDF The Black Hole

A black hole with the mass of a car would have a diameter of about 10 –24 m and take a nanosecond to evaporate, during which time it would briefly have a luminosity of more than 200 times that of the Sun. Lower-mass black holes are expected to evaporate even faster; for example, a black hole of mass 1 TeV/c<sup>2</sup> would take less than 10 –88 seconds to evaporate completely.

Black Hole Properties . An object whose entire mass  $M$  lies within  $r_s$  is considered to be a black hole. Event horizon is the name given to  $r_s$ , because from that radius the escape velocity from the black hole's gravity is the speed of light. Black holes draw mass in through gravitational forces, but none of that mass can ever escape.
