The fact of the matter is on-going SQL-injection attacks are a fact of life. They are not the only ones, either; every day there are mass spamming of new pieces of malware.

LizaMoon the Latest SQL-Injection Attack | McAfee Blogs

SQL injection is a code injection technique, used to attack data-driven applications, in which malicious SQL statements are inserted into an entry field for execution. SQL injection must exploit a security vulnerability in an application's software, for example, when user input is either incorrectly filtered for string literal escape characters embedded in SQL statements or user input is not strongly typed and unexpectedly executed. SQL injection is mostly known as an attack vector for websites

SQL Injection - Wikipedia

Like most surveys, The SQL Injection Threat Study provides the information, but not conclusions. Ponemon and Sabo were asked to speculate on the survey report's findings.

This threat is the most frequent and consistently rated top security exploit in the history of database software. Despite years of research, identification, and attention, SQL injection persists and continues to plague organizations via unprotected endpoints.

SQL Injection: What is it? Causes and exploits

A SQL injection attack consists of insertion or "injection" of a SQL query via the input data from the client to the application. A successful SQL injection exploit can read sensitive data from the database, modify database data (Insert/Update/Delete), execute administration operations on the database (such as shutdown the DBMS), recover the content of a given file present on the DBMS file system and in some cases issue commands to the operating system.

Website Attacks - SQL Injection And The Threat They Present

SQL injection can be killed stone dead by the simple expedient of using parameterised database queries - but only if you have the discipline to use them everywhere, all the time.
