Toyota's HSD system replaces a normal geared transmission with an electromechanical system. An internal combustion engine (ICE) delivers power most efficiently over a small speed range, but the wheels need to be driven over the vehicle's full speed range. In a conventional automobile the geared transmission delivers different discrete engine speed-torque power requirements to the wheels.

The TSB fixes these issues with a software re-flash to the Engine Control Module (ECM) and many dealers also check the transmission fluid level. This means there is nothing mechanically wrong with the transmission, which Toyota uses elsewhere in their lineup, but rather it is a software calibration issue and a lack of transmission fluid from the factory.
